Location : Karachi

ABOUT ME

Computer Science graduate with 6 month experience in Data Analytics and a strong passion for Data Engineering. Proficient in Python, SQL, Apache Airflow, Docker, ETL pipelines, and web scraping, with practical experience in building automated data workflows, data extraction, transformation, and reporting solutions. Familiar with data warehousing concepts, workflow orchestration, and cloud-based data engineering practices. Eager to contribute as a Junior Data Engineer by building reliable, scalable, and efficient data pipelines while continuously expanding technical expertise.

SKILLS

- Data Engineering & ETL: ETL Workflows, Data Warehousing, Data Cleaning, Data Transformation, Data Preprocessing, SQL Data Pipelines
- Programming: Python, Pandas, NumPy, Regex, JSON/CSV Handling
- Databases & SQL: SQL Server, Snowflake , Database Design, Stored Procedures, Joins, Views
- Cloud & Big Data: Snowflake (Learning), PySpark (Basic), Distributed Data Processing
- Visualization & Reporting: Power BI (DAX, KPIs, Dashboards), Excel (Pivot Tables, VLOOKUP, Charts, Slicers)
- Python & Automation: BeautifulSoup, Selenium, Requests, Data Extraction, Regex
- Version Control & Tools: Git, GitHub, Docker , Apache Airflow , Jupyter Notebook, VS Code

WORK EXPERIENCE

Data Analyst

Darul Sehat Hospital, Karachi | Jan-2026 – June-2026

- Cleaned and transformed hospital operational datasets for reporting.
- Developed KPI dashboards using Excel and Power BI.
- Improved reporting workflows by structuring and validating data.
- Ensured data quality and consistency across operational reports.

Automation Assistant (Selenium IDE Project)

Remote | 2025

- Helped with a small client project using Selenium IDE for basic web automation
- Recorded actions and created simple scraping flows under guidance
- Focused on selecting elements, testing flows, and handling repeated steps.

EDUCATION

Bachelor of Science in Computer Science (BSCS)

Benazir Bhutto Shaheed University Lyari

2022 – 2026 | CGPA: 3.07/4.00

PROJECTS

Smart City Air Quality Monitoring (Snowflake | Python | Power BI)

- Built an end-to-end cloud data engineering pipeline using Python, Snowflake, SQL, and Power BI.
- Simulated IoT sensor data and integrated real air quality data from the OpenAQ API.
- Designed a Bronze → Silver → Gold data warehouse with ETL pipelines for cleaning and transformation.
- Developed interactive Power BI dashboards with DAX to analyze AQI, PM2.5 trends, health risks, and city-wise insights.

SQL Data Warehouse Project (SQL Server)

- Designed and implemented a multi-layer SQL Data Warehouse using the Bronze, Silver, and Gold architecture.
- Built ETL pipelines to load raw data into Bronze tables.
- Cleaned, transformed, and standardized data in the Silver layer.
- Developed business-ready Gold tables for reporting and analytics.
- Created SQL scripts for schema creation, bulk data loading, and data validation.
- Applied dimensional modeling concepts to organize analytical datasets.

Apache Airflow ETL Pipeline

- Built an end-to-end ETL pipeline using Apache Airflow, Python, Pandas, and Docker.
- Automated the extraction, transformation, and loading of S&P 500 company data.
- Developed Airflow DAGs with task dependencies and scheduling to orchestrate data workflows.
- Processed and stored cleaned datasets for downstream reporting and analysis.

Power BI – Sales Analysis Dashboard

- Developed an interactive dashboard with DAX KPIs, slicers, and trend charts.
- Analyzed revenue, customer demographics, product performance, and regions.
- Published dataset and PBIX on GitHub

Power BI – Call Center Performance Analysis (MySQL)

- Developed an end-to-end dashboard by integrating MySQL database with Power BI to analyze 5,000+ call records.
- Built DAX-based KPIs to track 80%+ answer rate, issue resolution performance, and customer satisfaction (3.4/5).
- Identified top-performing agents and peak call periods using trend and performance analysis.

Urdu News Scraper – Daily Article Extraction with Pagination (Python)

- Built a Python-based tool that automatically scrapes ARY , BBC URDU daily-updated Urdu news articles .
- Used BeautifulSoup and Requests to extract titles, URLs, and full article .
- Handled pagination logic to navigate across multiple pages.

CERTIFICATIONS

Big Data Analytics Techniques - IBA KARACHI

Issued: 2025

- Skills: Hadoop, PySpark, SQL, data processing, distributed systems, and other Big Data concepts

Python for Everybody – University of Michigan (Coursera)

Completed: 2024
